

Neue PHP Version

Installieren / Ubuntu

[Install new PHP Version (Ubuntu-caddy v2)]

option wenn noch nicht geschehen (z. B. beim aller ersten mal)

```
sudo add-apt-repository ppa:ondrej/php
```

```
sudo apt update
```

install PHP [version] mit entsprechenden Packages (bereits installierte Packages für bestehende PHP Version ausgeben: `dpkg -l | grep php8.4`)

```
sudo apt install php8.4 php8.4-cli php8.4-common php8.4-fpm php8.4-mysql php8.4-xml php8.4-mbstring php8.4-curl php8.4-opcache php8.4-gd php8.4-gmagick php8.4-intl php8.4-readline php8.4-zip
```

```
sudo systemctl start php8.4-fpm
```

```
sudo systemctl enable php8.4-fpm
```

then change your php version

```
nano /etc/caddy/sites/[site-name-file]
```

```
sudo systemctl restart caddy
```

[PHP Package nachträglich installieren (Ubuntu-caddy v2)]

```
sudo apt install php8.4-mbstring
```

```
sudo systemctl restart php8.4-fpm
```
